

EDUCATION

University of New South Wales

Master of Commerce in Business Analytics

Sydney, NSW

Feb. 2026 - Dec. 2026 (Expected)

Hong Kong Baptist University (BNBU, Zhuhai Campus)

Bachelor of Business Administration (Honours) in Accounting

Zhuhai, CN

Sep. 2021 - Jun. 2025

RESEARCH INTERESTS

- LLM evaluation
- Retrieval-augmented generation
- Knowledge graphs
- ESG and sustainability disclosure

PUBLICATIONS & WORKING PAPERS

Ding, Y., Yang, Z., Lu, Y., Lan, L., Tang, Y., Yang, Z., Tang, X., **Hu, J.**, Ju, M., Zhang, W., Yang, W., Xu, X., & Zhang, W. (2026). EulerESG: A unified platform for standards-aware ESG disclosure analysis. In *Proceedings of the IEEE International Conference on Data Mining (ICDM), Demo Track*, Shenyang, China. (Accepted).

RESEARCH EXPERIENCE

Reproducible Diagnostics and Benchmark Design for ESG Disclosure Assessment

UNSW, Sydney [\[Code\]](#)

Aug. 2026 - Present

Supervisor: Dr. Zhengyi Yang [\[Details\]](#)

- Diffed human-reviewed labels against raw model output on a 25,224-record ESG disclosure corpus (37 ASX entities, 53 report-years, AASB S1/S2, GRI, SASB): review adds evidence conditions 4.38x more often than it removes them (5,310 vs 1,211).
- Showed evidence presence alone reproduces the corpus's disclosed-vs-not labels at 99.92%, so three-class macro-F1 overstates performance and the benchmark endpoint must be criterion-level.
- Built a reproducible pipeline with a 13-issue quality register and scored 29 AASB S2 greenhouse-gas requirements on label balance to select the benchmark subset. Joint work with Zherui Wang (UNSW CSE), who built the underlying corpus.

Carbon Chain – Cross-Border Sustainability Compliance Verification

China International College Students' Innovation Competition 2027

Jun. 2026 - Present

- Lead a six-member backend, frontend and evaluation team extending the EulerESG platform to Chinese disclosure rules.
- Designed and implemented a four-layer graph (ESG entities, claim-evidence, provenance, temporal) that scores how far a disclosure claim is supported by traceable evidence, counting evidence by independent source rather than by document.
- Crawled the CNINFO portal for 48 sustainability and annual reports from 10 A-/H-share issuers (2021-2025) as a pilot corpus.
- Ran a first end-to-end pilot on CATL's carbon neutrality chapter, identifying restated prior-year figures and competing national accounting standards as the main obstacles to cross-issuer comparison.

The Impact of Corporate Environmental, Social and Governance (ESG) Disclosure on Corporate Investment Efficiency

Final Year Project submitted to BNBU [\[PDF\]](#) [\[Code\]](#)

Supervisor: Assoc. Prof. Man Hung Alvin Cheng [\[Details\]](#)

Feb. 2024 - Apr. 2025

- Tested whether ESG disclosure improves investment efficiency through information transparency on 19,103 firm-year observations of Chinese A-share firms (2013-2023, CSMAR and Sino-Securities).
- Constructed three residual-based investment-efficiency measures (Richardson 2006; Biddle et al. 2009; Chen et al. 2011) and a PCA-based information-transparency index from three daily-frequency liquidity measures, estimated with year and industry fixed effects and firm-clustered standard errors.
- Addressed endogeneity with 2SLS on three peer-average instruments (Kleibergen-Paap Wald F = 4,886) and two-step system GMM: ESG disclosure is significant at the 1% level across all three measures under 2SLS, while the system GMM coefficient is positive but insignificant, indicating that identification rests on cross-firm rather than within-firm variation.
- Established partial mediation through one-year-lagged transparency by 1,000-replication bootstrap (indirect effect p = 0.022); across five heterogeneity dimensions the direct effect holds broadly while the transparency channel concentrates in growth-stage, non-SOE, and high-technology firms.

SELECTED PROJECTS

Vecton AI – Business Analysis & Financial Planning

China International College Students' Innovation Competition 2026

Sep. 2026 - Present

- Built consolidated three-year financial statements for the Australian and Chinese entities.
- Added break-even, payment-term and dilution scenarios to size funding needs, presented in bilingual pitch decks.

ESG-Augmented Corporate Credit Risk Prediction and Explainability Analysis

2026, UNSW, Sydney [\[Code\]](#)

- Built an XGBoost pipeline predicting KMV distance-to-default on a 42,000+ firm-year A-share panel (2015-2025) with 18 financial, market and ESG features, reaching $R^2 = 0.68$, plus a distress classifier predicting next-year ST/*ST status at ROC-AUC = 0.92; avoided target leakage by rejecting Z-score for a market-based risk measure.
- Quantified the incremental value of ESG through a firm-grouped cross-validation ablation, isolating a small but statistically significant gain (-1.25% RMSE, $p = 0.003$) that held across three distance-to-default definitions and an independent distress target, with multi-layer SHAP explainability.

Multi-Factor Quantitative Stock Selection & Backtesting

2026, UNSW, Sydney [\[Code\]](#)

- Built a point-in-time factor-research pipeline on 498,893 stock-months across 5,546 A-share firms including delisted names (2015-2025), engineering 8 style and risk factors with winsorization, industry and size neutralization, and a statutory-disclosure lag to remove look-ahead bias.
- Evaluated factors via Spearman rank IC, ICIR and decay curves, surfacing a dominant negative turnover effect, small-cap and low-volatility premia, and statistically absent momentum; a walk-forward LightGBM composite reached ICIR 0.72 and a gross long-short quintile Sharpe of 0.93 versus 0.31 for the CSI 300, before transaction costs and A-share short-sale constraints.

Chinese White Dolphin Habitat Loss and Conservation in Western Hong Kong

2023, BNBU [\[Code\]](#)

- Built a reproducible PDF-to-panel pipeline (PyMuPDF, pandas) parsing ten years of AFCD marine-mammal monitoring reports into a validated area $\times$ monitoring-period panel of 2,209 sightings and 7,023 survey-effort records, aligned with EPD station-level water-quality data.
- Applied a Negative Binomial GLM with area fixed effects and a survey-effort offset, kernel utilization distributions, a Poisson tensor-smooth spatial GAM, and Pettitt / Mann-Kendall change-point tests, estimating an effort-controlled decline of $\sim 12.4\%$ per year (IRR = 0.876) and a 50% core-use area contracting from 45 to 26 km² with a 6.5 km south-westward shift.

INDUSTRY EXPERIENCE

Financial Analysis Intern

Jinchuan Group Corporation Limited

Jun. 2024 - Sep. 2024

Jinchang, CN

Capital Budgeting Intern

State Grid Corporation of China

Jun. 2022 - Sep. 2022

Jinchang, CN

Investment Research Intern

Gansu Electric Power Investment Group Corporation Limited

Jun. 2021 - Sep. 2021

Lanzhou, CN

HONORS & AWARDS

Dean's List

BNBU, 2022-2023, 2023-2024, 2024-2025

Bronze Award of Servant Leadership

Student Affairs Office, BNBU, 2024

Excellent Student of Environmental Awareness

Whole Person Education, BNBU, 2023

TECHNICAL SKILLS

- **Programming:** Python, SQL, R, Stata, MATLAB, SAS, SPSS, Excel VBA
- **Research software engineering:** pytest, deterministic seeding, provenance tracking, reproducibility verification, PDF parsing and OCR-assisted extraction, Git, RDF/OWL, SHACL, PROV-O, knowledge graphs, RAG, LLM-as-judge evaluation
- **Machine Learning and statistics:** PyTorch, scikit-learn, XGBoost, SHAP; panel fixed effects, 2SLS, system GMM, bootstrap inference
- **Research Data:** CSMAR, Wind, Bloomberg, WRDS, TuShare, SSE/SZSE/HKEX filings, ESG and sustainability reports
- **Languages:** Mandarin Chinese (native), English (proficient)
